

- 1 Take a Digital Snapshot.** List the digital places you use regularly: *social media apps, gaming platforms, email accounts, streaming services, shopping sites.*
- 2 What Do These Apps Know About You?** Pick 2 to 3 platforms from your list and discuss: what info the app collects, who can see your posts/profile, if the app connects to money or allows purchases? Poor digital security can lead to financial trouble!
- 3 Spot the Risks.** Discuss how choices (such as reusing the same password or posting your school, location, or routine) could affect privacy, money, or safety. As a family, create a strong password rule (12+ characters, no names or birthdays) or turn on two-factor authentication.

DIGITAL SECURITY FOR FAMILIES

Protect your digital footprint by understanding online safety, privacy, and smart digital choices.
